

Input

Clinical EEG 10-20 Recording

CAUEEG, $n = 1,272$
19 channels, native 200 Hz $\rightarrow$
harmonised 256 Hz,
eyes closed, resting
external: **3 cohorts**, $n = 257$

full 10-20
19 electrodes

bilateral
8 electrodes

temporo-occipital
4 electrodes

temporo-parietal
2 electrodes

fronto-occipital
2 electrodes $\rightarrow$ 1 signal

Sensor Layer

Re-derived as a device
42 conditions + field faults:
16 montages,
22 rate $\times$ depth pairs,
4 preprocessing arms
external: **EasyCog** (wearable)

Model Layer

Fixed Classifier Family & Training Protocol

17 qEEG markers,
logistic regression, 5 $\times$ 5 CV

Tasks:

Dementia, MCI, Screening

4 Arms:

age, EEG, EEG+age, deviation

Output

Scored against age

incremental margin per
condition, plus a per-recording
deviation
